### Product Description

STEAM made simple!

Educator Entry Kit

Say hello to the Ozobot Evo, a smart robot that brings coding and creativity to your classroom — screen-free or online. Students can use markers and paper to create Color Codes, sequences of colors that communicate commands to Evo through its optical sensors. This helps them develop fundamental coding skills like sequencing and debugging. They can go beyond the basics with OzoBlockly, powered by Google's Blockly, which features five levels of hassle-free on-screen programming. Kids will love how Evo interacts with the environment! In addition to its optical sensors that respond to visual indicators like Color Codes, Evo features proximity sensors that allow it to perform tricks and detect obstacles. Plus, LED lights and a built-in speaker allow Evo to communicate with students as they practice their STEM skills.

**Educator Entry Kit:** Includes 1 Evo robot, 1 charging cable, 1 Color Code Marker Set, and Educator Bot Camp.

- Free Evo by Ozobot app available for download at Apple App Store and GooglePlay
- Regular app updates include new features and games
- Ages 8+
